Summary

Backend and infrastructure engineer with nine years of experience, the last four spent on payment and fraud systems where correctness is not negotiable. Comfortable being the person who is paged. Most interested in roles where the hard part is the distributed system rather than the feature list, and where I can keep mentoring rather than move fully into management.

Experience

Staff Backend Engineer — Tovana Payments, Tel Aviv · Jan 2023 – present

- Technical owner of the transaction ledger — Go services on Kubernetes handling roughly 2,500 payments per second at peak with a hard exactly-once requirement.
- Led the migration from a single PostgreSQL primary to Vitess-sharded MySQL across seven months with no customer-visible downtime and no data loss.
- Rebuilt the fraud-scoring pipeline on Kafka and Flink, bringing decision latency from 400ms down to 45ms at p99 and letting the risk team ship rules themselves.
- Introduced an error-budget policy that cut the paging rate by more than half in two quarters, mostly by deleting alerts nobody acted on.
- Mentor three mid-level engineers; run the internal design-review forum.

Senior Backend Engineer — Sela Security, Ra'anana · Jun 2019 – Dec 2022

- Built the ingestion tier for a cloud security product — Python and Go, ingesting about 8TB of audit logs daily from AWS, GCP and Azure.
- Designed a multi-tenant rate limiter that survived a customer's 30x traffic spike without spilling over into other tenants.
- Took the service from manual deploys to Terraform and ArgoCD; deploy frequency went from fortnightly to several times a day.

Backend Developer — Amdocs, Ra'anana · Aug 2017 – May 2019

- Java microservices for telecom billing; wrote the reconciliation job that finally closed a long-running revenue-leakage discrepancy.

Skills

Languages: Go, Python, Java, SQL, Bash
Data: PostgreSQL, MySQL/Vitess, Kafka, Flink, Redis, ClickHouse
Infrastructure: Kubernetes, Terraform, ArgoCD, AWS, GCP, Prometheus, Grafana
Practices: distributed systems design, SRE and on-call, incident review, mentoring

Education

B.Sc. Software Engineering, Technion — Israel Institute of Technology, 2017.

Talks

"Sharding a ledger without losing a cent" — Go Israel meetup, 2025. Occasional contributor to the Vitess project.

Languages: Hebrew (native), English (fluent), Russian (conversational)
